Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

602877005F1 NCI_CGAP_Mam2 Mus musculus cDNA clone IMAGE:5008608 5', BI080524
Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. Library went through one round of normalization, and was constructed by Bento Soares and M. Fatima Bonaldo. " 228 c 205 g 166 t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine
iscnaemic limb angiogenesis; diabetic neovascularisation; fracture;

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, positasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telanglectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, nestratiovenous malformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               318

Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration -

Example 8; Pages 58-59; 68pp; English.

inte parenta utastoases a nowa misserie encotating a rustion procession a signal sequence, an immunoglobulin For region, and an anglogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including conditions the meangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, remumeroid arthritis, psoriasis, coular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental citizoplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a DNA encotaining canine construction of immunofusin containing canine The patent discloses a DNA molecule encoding a fusion protein comprising immunoqlobulin Fc fragment

The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of vessels such as diabetic retinopathy, neovascular glaucoma, retinopathy of prematurity, macular degeneration, corneal graft rejection, retrolantal fibroplasia, rubeosis, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent diseases include Osler Webber syndrome, myocardial angiogenesis, plaque neovasculisation, telangiectesia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GlyLeuAlaGlyThrPheArgAlaPheLeuSerSerArgLeuGlnAspLeuTyrSerI]

Homo sapiens.

The present sequence encodes an alternate functional endostatin

protein. When the human endostatin gene sequence AAA27004 is

recombinantly expressed, an observable doublet of protein results, both

versions of which are functional endostatin proteins. The present gene

sequence encodes an endostatin variant which is the same as the protein

ceded by AAA27004 minus the first four amino acids. Recombinant mouse

encoded by AAA27004 minus the first four amino acids. Recombinant mouse

conditions and administered subcutaneously to mice implanted

with Lewis lung carcinomas. There was tumour mass regression

con-detectable levels after 12 days of therapy due to the angiogenesis

inhibitory activity of endostatin. Thus the protein is useful for

treatment of angiogenesis- dependent cancers. The polymucleotide and

colypeptide sequences of this endostatin are useful for treating and

colypeptide sequences of this endostatin are useful for treating and

colypeptide sequences, plaque neovascularisation, telangiectasia,

myocardial angiogenesis, plaque neovascularisation, telangiectasia,

calls e.g. intestinal adhesions, atherosclerosis, scleroderma. The

protein may also be useful as a birth control agent by reducing or

protein may also be useful as a birth control agent by reducing or

preventing uterine vascularisation. The gene for endostatin may be

continue cells of indostatin may be

continue cells of endostatin may necessary and the express high levels of endostatin, eg. tumour cells, by generating cDNA from mRNA using reverse transcriptase and then amplifying the DNA sequence. Novel endostatin capable of inhibiting endothelial cell proliferation and angiogenesis, useful for treating angiogenesis-dependent cancers and as birth control agents Claim 11; Page 40; 68pp; English 2000-365617/31. Producing Endostatin protein for treating angiogenesis mediated diseases such as solid tumours, comprises recombinantly producing the protein using an expression system, and recovering and purifying the protein

Claim 6; Page 32; 67pp; English.

The sequence encodes Human Endostatin(TW) N-terminal deletion

mutant lacking the N-terminal 4 amino acids. The new method of the

mutant lacking the N-terminal 4 amino acids. The new method of the

invention is useful for producing, recovering and purifying Endostatin

(TW) from biological sources, such as biological fluids, tissues, cells,

culture media, and fermentation media. Endostatin(TM) is useful for

treating angiogenesis mediated diseases such as solid tumours, blood

control tumours, leukaemias, tumour metastases, benign tumours, e.g.

the managioma, acoustic neurcomas, neurofibromas, trachomas, and pyogenic

control tracing arthritis, psoriasis, ocular angiogenic diseases,

The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Plasminogen; human; angiostatin; endostatin; gene therapy; vector; anti-angiogenic; attenuation; cytostatic; anti-diabetic; ophthalmology; tumour growth; solid tumour; diabetic retinopathy; retina; ss

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes an angiogenesis inhibiting factor (1), designated IAF-1. The present invention also describes: (1) preparation of (1) and its derivative; (2) an IAF binding acceptor and its preparation; and (3) an IAF antibody. (1) is useful for preparing new bological preparations for effectively treating various tumours and abnormal-vessel diseases. The IAF antibody is preferably a polyclonal antibody, mosaic antibody, single stranded antibody and human originated
                                                                                                                                                       9

a signal sequence, an immunoglobulin Fc region, and an angiogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental

fibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints' angiofibroma, wound granulation, and excessive or abnormal stimulation of endochelial cells, intestinal cells, atherosclerosis, sclerodermal and hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a cDNA encoding human endostatin used in the construction of immunofusin containing human immunoglobulin gamma (IgG) Fc fragment.

Note: This sequence is stated in claim 12 as being amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                            refers to this sequence as being nucleotide sequence of human endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                               09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; Endostatin(TM); angiogenesis mediated disease; solid tumours; blood borne tumour; lgukaemia; tumour metastasis; benign tumour; haemangioma; acoustic heuroma; neurofibroma; trachoma; rubeomis; pyogenic granuloma; rheumatoid arthritis; psoriasis; colon cancer; ocular angiogenic disease; diabetic retinopathy; macular degeneration; retinopathy of prematurity; macular corneal graft rejection; neovascular glauçoma; retrolental fibroplasia; Osler-Webber Syndrome; myocardial angiogenesis; plaque neovascularisation; telangiectasis; plaque neovascularisation; telangiectasis; haemophiliac joint; angiofibroma; wound granulation; ds.

ince sequence accourate numera survolentariary, inte new merchou of Life invention is useful for producing, recovering and purifying Endostatin (TM) from biological sources, such as biological fluids, tissues, cells, culture media, and fermentation media. Endostatin (TM) is useful for treating andiogenesis mediated diseases such as solid tumcurs, blood borne tumcurs, leukaemias, tumcur metastases, benign tumcurs, e.g. treathomas, acoustic neuromas, neurofibromas, trachomas, e.g. granulomas, rheumatcid arthritis, psoriasis, ocular angiogenic diseases, c.g., diabetic retinopathy, retinopathy of prematurity, macular c.g. degeneration, corneal graft redjection, neovascular glaucoma, colon cancer, retrolental fibroplasia, rubbosis, Osler-Webber Syndrome, c.g. myocardial angiogenesis, plaque neovascularisation, telangiectasia, myocardial angiogenesis, plaque neovascularisation, telangiectasia, concer, retrolental fibroplasia, rubbosis, Osler-Webber Syndrome, c.g. neemphilias joints, angiofibroma, and wound granulation. Endostatin(TM) is also useful for treating disease of excessive or abnormal stimulation of endothelial cells such as intestinal adhesions, atherosclerosis, c.g. endostatin(TM) can be stored in buffers for extended periods of time, and biologically active Endostatin(TM) are obtained by the new method.

C. Endostatin(TM) can be stored in buffers for extended periods of time, and also subjected to lyophilisation, while preserving biological activity: Centrifugation of broth from fermentation steps in production is avoided, or additional proteins, pigments, enzymes and other cellular chemicals and additional proteins, pigments, enzymes and other cellular chemicals and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

```
This sequence encodes endostatin. Endostatin is a 20 kD C-terminal fragment of collagen XVIII that inhibits angiogenesis. The endostatin coding sequence may be used in the recombinant viral vector of the invention for obtaining angiostatin activity. The vector comprises a promoter capable of expressing human angiostatin operably linked to a protect capable of expressing human angiostatin operably linked to a fartuctural gene encoding one or more domains of human angiostatin. The vector, which may be a replication-defective viral vector, is useful for inhibiting angiogenesis in a mammal, especially with cancer or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant viral vector expressing human angiostatin useful for inhibiting angiogenesis in a mammalian subject with cancer or tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: This sequence is given incorrectly in the sequence listing of
the specification as an amino acid sequence.
